

## **New Generation Starting Bull**

Banner's product innovation of the year in 2009 is the Starting Bull. The battery has been subjected to a complete makeover and its calcium technology ensures absolute zero maintenance and reliable cold start behaviour. Twelve standard types from 40-100 AH have already been equipped with 4-chamber leak protection as a standard feature. The labyrinth structure in the battery lid prevents the uncontrolled escape of battery acid due to extreme vibration and tilting. In addition, securely anchored, integrated backfire protection and central degassing furnish further guarantees of operational safety.
