

New Generation Power Bull

Banner now offers twelve of its European-type Power Bull batteries from 44-100AH with patented “Double Top” technology. The “Double Top” battery lid design furnishes the Power Bull with 100% leak protection even in the case of extreme tilting of 45°.

Every aspect of the latest Power Bull starter battery generation fulfils the OEM standards of leading automotive manufacturers. Indeed, the battery was developed to meet the needs of modern cars and Banner currently supplies Power Bull technology for the first fitting of BMW, Skoda and Volkswagen models.

The zero-maintenance Power Bull also employs 100% calcium technology. This offers increased peak current and enhanced starting power, as well as longer life in connection with constant and cyclical loads. This characteristic is of special significance in view of the massive increase in the in-board power requirement of modern cars created by numerous control devices.
